## NAVIGA - Competition Rules 2000

### Categories FSR - O

The NAVIGA - Competition rules of 2000 for the categories FSR-O have been updated based on the Presentation of FSR-O rules by P Firmin, and the decisions during the European Championship in Polen 1999.

The Section Management have make in October 2000 and January 2001 only corrections in this rules book.

Any comments about this rulebook may be routed direct to e-mail: [nils.cederberg@home.se](mailto:nils.cederberg@home.se)

This version is copied from the FSR-H and FSR-V rulebook. The paragraphs that are valid from that book are blanked in this version. Just to get it easier to copy this version into that book when this is ready.

This version is completed by Nils Cederberg  
and accepted by the FSR Section.

## 1 Definition of models

Models in the FSR categories are controlled by the competitor using radio control. These are model boats of free design, which conform to the race requirements, however should in form and design look like a boat.

Offshore boats are deep vee or tunnel hull with surface or semi-surface drive. Hydro-plane or other three or more planing surface are not allowed. If open cockpit there must be a steering wheel, driver and navigator installed. With an enclosed cockpit it is not necessary.

## 2 Classes

The category FSR can be divided into the following groups and classes:

- |                       |  |
|-----------------------|--|
| <b>Class FSR-H3.5</b> | Free build HYDRO - planes* with internal combustion motor up to 3.5 cm <sup>3</sup> and with surface drive propulsion.   |
| <b>Class FSR-H7.5</b> | Free build HYDRO - planes* with internal combustion motor above 3.5 cm <sup>3</sup> up to 7.5 cm <sup>3</sup> and with surface drive propulsion.   |
| <b>Class FSR-H15</b>  | Free build HYDRO - planes* with internal combustion motor above 7.5 cm <sup>3</sup> up to 15. cm <sup>3</sup> and with surface drive propulsion.   |
| <b>Class FSR-V3.5</b> | Free build racing models for endurance races (20 – 30 min) with internal combustion motors up to 3.5 cm <sup>3</sup> and below waterline propulsion.   |
| <b>Class FSR-V7.5</b> | Free build racing models for endurance races (20 – 30 min) with internal combustion motors above 3.5 up to 7.5 cm <sup>3</sup> and below waterline propulsion.   |
| <b>Class FSR-V15</b>  | Free build racing models for endurance races (20 – 30 min) with internal combustion motors above 7.5 up to 15.0 cm <sup>3</sup> and below waterline propulsion   |
| <b>Class FSR-V35</b>  | Free build racing models for endurance races (20 – 30 min) with internal combustion motors (petrol-motor with spark plug ignition) above 15.0 up to 35.0 cm <sup>3</sup> and below waterline propulsion. |
| <b>Class FSR-O3.5</b> | Free build offshore boats with internal combustion motors up to 3.5 cm <sup>3</sup> .  |
| <b>Class FSR-O7.5</b> | Free build offshore boats with internal combustion motors above 3.5 up to 7.5.   |
| <b>Class FSR-O15</b>  | Free build offshore boats with internal combustion motors above 7.5 up to 15.0 cm <sup>3</sup> .   |
| <b>Class FSR-O35</b>  | Free build offshore boats with internal combustion motors (petrol-motor with spark plug ignition) above 15.0 up to 35.0 cm <sup>3</sup> .  |

Remark:

\* HYDRO-planes (A free build model with two or more planing surfaces).

### **3 Principal and General Rules**

#### **3.1 Principal Rules**

##### **3.1.1 Competitions where the rules apply**

##### **3.1.2 Entry Fee**

##### **3.1.3 Protest Fees**

#### **3.2 Personal Rules**

##### **3.2.1 Age Groups**

##### **3.2.2 Competitor registration**

##### **3.2.3 Maximum Allowed Competitors**

- (1) At the world championships each country is allowed to enter the following number of competitors in seniors and juniors:
  - In the FSR-H classes 3 competitors and the title defendant
  - In the FSR-V classes 3 competitors and the title defendant
  - (In the FSR-O classes 3 competitors and the title defendant)
- (2) In continental championships
  - In the FSR-H classes each 5 competitors and the title defendant
  - In the FSR-V classes each 5 competitors and the title defendant
  - (In the FSR-O classes each 5 competitors and the title defendant)
- (3) For FSR-O it is allowed to start 64 boats per class. If there are more interested to participate, there will be a reduction of participants from those countries who have the most. Independent of the total participants above, each country can register at least the number in (1) or (2) above. This rule is limited within the time of introduction of the class FSR-O.

The last introduction will be on the worldchampionship in 2002

##### **3.2.4 Assistants and substitution of the competitor**

#### **3.3 Technical rules**

##### **3.3.1 Propulsion of models and fuels**

##### **3.3.2 Fuel**

- (1) Free fuel is allowed except in the FSR-V35 and FSR-O35 class.
- (2) Fuel in the FSR-V35 and FSR-O35 class must be a petrol-oil mixture.  
Petrol can be of any octane level.  
The use of Methanol mixtures is prohibited.

##### **3.3.3 Noise reduction, noise level measurement and rules**

- (1)
- (2)
- (3)
- (4)
- (5)
- (6) For the method of measuring noise levels in classes FSR-H, FSR-V and FSR-O refer to paragraph 7.

### **3.3.4 Application and use of radio control equipment and frequency control**

### **3.3.5 Time Measuring**

### **3.3.6 Buoys (Dimensions, Construction, Anchorage)**

### **3.3.7 Starting pontoon (Construction and Materials)**

## **3.4 Sport Rules**

### **3.4.1 The Competition Area**

### **3.4.2 Starting area, the preparation area and access permission**

### **3.4.3 Allowed Number, Entry Possibilities and Race Conditions of the Models**

- (1) .
- (2) .
- (3) *For entry of a model in other classes the following rules apply:*
  - *A model in classes FSR V3.5, FSR V7.5, and FSR V15 can also start in classes F1-V or visa versa provided it complies with the building rules of subject class.*
  - *An offshore boat is not allowed to start in any other FSR category in the same competition.*

(4)

(5)

### **3.4.4 Re-run of a race**

### **3.4.5 Registration Numbers**

- (1) At all NAVIGA events all models must have fixed registration numbers.
- (2) The respective country gives out the registration numbers. If the nationality is not part of the registration number it must be attached to the models. Registration numbers and nationality must not be changed and must be permanently fixed.

### **3.4.16 Result lists**

For special regulations regarding the contents of the result list refer to sections 6.8. for FSR-V, 6.15 for FSR-H and 6.20 for FSR-O.

## **3.5 NAVIGA – Protest Policy**

### **3.5.1 Principal Rules**

### **3.5.2 Lodging of protests**

### **3.5.3 Handling of Protest**

## **3.6 The Model – Measurement Certificate**

*For model classes FSR-H, FSR-V and FSR-O no international model –measurement certificate is required.*

## **3.7 General rules regarding construction for category FSR**

(1) For competitions in category FSR models are of free design (see definition in section 1). The model however must be owned by the competitor.

(2)

(3)

(4)

## **4 General Rules regarding the set up of competition courses for the category FSR**

(1) The competitions in the category FSR are performed on three different courses.

- For the FSR-H category see drawing 4
- For the FSR-V category see drawing 3
- For the FSR-O category see drawing 6

(2)

## **5 General Rules regarding start and termination of a race or heat**

## **6 Competition requirements in FSR category**

### **6.1 General construction rules and regulations**

(1)

(2)

(3) Every model must have on the deck a longitudinal mount for attaching numberplate that has to be provided by the competitor. The numberplate must be made out of flexible and durable material, which does not cause damage to the model when run over. The plate must be white and the numbers from 1 to 13 must be black. The numberplate must be attached to the model with two connections.

(4) The dimensions of number plates for category FSR are as follows (see drawing 2):

- Height 100 mm
- Width 120 mm
- Thickness approx. 2 mm
- Distance between the holes 100 mm
- Distance of hole from the bottom of plate 10 mm
- Diameter of hole 5 mm

The corners of the shield must be rounded off

Drawing 2: Number plate for category FSR.

(5)

(6)

(7)

(8) In classes FSR-H and FSR-O the rescue of models is only performed after completion of the heat. In FSR-O you are allowed to pickup your boat by your self from within the pontoon and restart.

(9)

(10)

(11)

(12)

(13)

(14) FSR-V35 boats must have a towing eye on the front for rescue purposes.

(15)

## **6.2 Manning Level of the Start Pontoon**

## **6.3 Minimum requirements for the starting area**

The minimum requirements for a starting area in the FSR category are:

- A starting pontoon for FSR-V class should be minimum 19,5 meters long and 1.5 meters wide, with numbered starting positions from 13 – 1. In the FSR-H/O class the starting pontoon should be minimum 12 meters long and 1.5 meters wide, with numbered starting positions from 8 – 1.
- 2 sets of number plates with the numbers 1 to 13 for FSR-V and 1 to 8 for FSR-H/O.

## **6.4 Competition course and duration of the race in the FSR-V Classes**

## **6.5 Procedures for Races in the FSR-V Classes**

## **6.6 Lap Counting for FSR-V races**

### **6.6.1 Manual lap counting**

### **6.6.2 Computerised lap counting**

## **6.7 Scoring in FSR-V classes**

## **6.8 Composition of Result Lists in the FSR-V classes**

## **6.9 Competition course and duration of a race in the FSR-H classes**

## **6.10 Start clock for FSR-H classes**

- (1) The start clock is designed for FSR-H races with special optical and acoustical information and signals, which the competitors use to prepare for the start of the heat.

Drawing 5: Start clock for FSR-H and FSR-O races.

(2) The start clock must comply with the following:

- 1 turn of the hand must be 30 seconds with a precision of approx. 1 second.
- The face of the clock must show the following points: 15 seconds, 7.5 seconds, 5, 4, 3, 2, 1 seconds.
- The 5-second segment must be shown in a contrast colour.
- There must be 4 red lights, which are all switched on at the beginning of preparation time. The lights will be switched off individually at 30-second intervals.
- After the last red light has gone off a yellow light will come on which indicates the 30 seconds control time when no boats can be launched. At the end of this 30 seconds a white light or acoustic signal will indicate the start of the race.
- The clock hand must reach the “12 o’clock” position at exactly the same time as the light or acoustic signal indicates the start of the race.
- The face of the clock must be white or orange, the hand must be black.
- The diameter of the face of the clock must be between 750 and 1000 mm.
- The start clock must be able to float so that it can be positioned within the competition course.

## **6.11 Procedures for races in the FSR-H classes**

## **6.12 Basic rules and penalties in the FSR-H classes**

### **6.12.1 Left Turns**

### **6.12.2 Right of Way**

### **6.12.3 Negotiating/passing the buoys**

## **6.13 Rules for overtaking in the FSR-H classes**

## **6.14 Calculation of final results in the FSR-H classes**

### 6.15 Composition of result lists in the FSR-H classes

### 6.16 Competition course and duration of a race in the FSR-O classes

- (1) The competition will be held on a course as shown in drawing 6. The competition course has to be placed so that the base line runs parallel to the starting pontoon and the centre line is at a right angle from between start positions 4 and 5 to the centre buoy.

Drawing 6: FSR-O competition course

- (2) Starting time for the heat has to be shown on a start clock (see drawing 5) or other adequate (optical or acoustic) means (see 6.10 for start clock).

### 6.17 Procedures for races in the FSR-O classes

- (1) A heat must have a minimum of 4 and maximum of 8 competitors. Each competitor must run at least 4 heats. If there are more than 8 competitors entered in a class, a final must be run in accordance with paragraph (3).
- (2) A heat shall be so composed that the competitors will be mixed in the heats as much as possible. Also the place on the pontoon shall be randomly.
- (3) 8 competitors with the highest scores from the heats qualify for the final. For the final one heat is to be run. The best placed competitor will occupy start position 1, the second best placed start position 2, the third best placed start position 3, the fourth best placed start position 4 etc. until the eight placed, who will occupy start position 8.
- (4) Before the start of each heat a radio check has to be carried out to prevent interference. Therefore all transmitters and receivers must be switched on. When it has been confirmed that there is no radio interference it is no longer possible to protest.
- (5) Each race consists of three independent phases:
- Preparation time (Pit time) 2 minutes
  - Control time (Milling time) 30 seconds
  - Course time (Race time) 8 minutes for qualification and 12 minutes for final
- (6) During preparation time engines are started, and the boats launched. Races cannot be repeated. Preparation time must not be delayed or cancelled, unless in exceptional

circumstances at the judges discretion (e.g. problems on the racecourse). Models can be adjusted during the preparation time, however the competitor is not allowed to leave the start position.

- (7) During the control time no further boats can be launched. During the course time the competitors are allowed for after start.
- (8) The competitors must drive their boats around the course *or the special lay-by zone allocated by the competition management*, so that all the competitors can cross the start line at the end of control time. Boats must drive the course in the clockwise direction.
- (9) During the last 15 seconds of the control time in order to ensure the safety of all the boats, the models must keep in a straight line after passing buoy No. 5. Zigzagging across the course, course changes in excess of 45 degrees in order to avoid crossing the start line early etc., are not allowed and are penalised with a one lap off.
- (10) The end of the control time indicates the start of the race time, regardless of where the boats are on the course.
- (11) Models crossing the start line immediately before the end of control time have a false start and must therefore complete an extra lap.
- (12) The race officially starts, when at the end of control time the first boat crosses the starting line.
- (13) FSR-O boats can be repaired and/or refuelled during a heat. Only laps completed during the heat will be counted.
- (14) During the racetime you may leave the start position to pickup the model or to fetch spare materials. However while driving the competitor must not leave the start position. It is not allowed to remove the transmitter from the start position.
- (15) All buoys must be negotiated in accordance with the course. Touching the buoys is allowed. Only those laps negotiated in accordance with the course are counted.
- (16) During the race each competitors laps must be displayed on a scoreboard.
- (17) If a buoy is passed on the wrong side, it is allowed to re circle the buoy without interfering with other competitors. If you do not re circle the buoy the lap will not be counted.
- (18) A slower boat can be overtaken on either side. During the overtaking manoeuvre the slower boat must not change course or get in the way of the overtaking boat. The overtaking boat can return to the racing line when no less then three boat lengths ahead.
- (19) The faster boat is not allowed to interfere with the slower model during the overtaking manoeuvre.
- (20) The boat on the race line, which is less than 5 boat lengths from a buoy, has right of way. A manoeuvre to force a boat to pass on the inside of a buoy in order to overtake is not permitted.
- (21) If a boat loses the numberplate during the race it is allowed to complete the commenced lap. Any laps completed after this lap without a number plat will not be counted.

- (22) A race can be stopped by the start position official due to exceptional circumstances (e.g. sheered off buoys). Rules for stopping a race:
- a) The start position official gives an acoustic signal about the same as at the end of a race. At the same time as the signal is given the clock which measures the duration of the race is stopped. After the start position official has given the signal, the models have to complete the commenced lap and this lap will be counted.
  - b) The time, from when the signal was given, until the models pass the finish line, must be recorded. The models have to be taken from the water and the engines stopped.
  - c) Competitors and assistants have to step back from the models. Repairs are not permitted. During the interruption in the race models can be rescued.
  - d) Rescued boats are not allowed to restart.
  - e) After resolving the cause for the interruption, the start position official will give a start signal. The time keeping will continue with the start signal.
  - f) If the race is stopped within the first three minutes it will be annulled and restarted from the beginning.
- (23) If a heat had to be stopped, all the laps and times have to be added together.
- (24) In cases of unfair behaviour, interference with other competitors, not following the rules or endangering spectators (e.g. collision with the starting pontoon) the start position leader can pronounce the following penalties.
- a) The first occurrence of not following the rules described in paragraphs (18) - (20), where no other boat has stopped as a result of the incident a warning (yellow card) will be given.
  - b) The second occurrence of not following the rules described in paragraph (18) - (20), or a more serious incident, or running over a stopped boat will be punished with a one-lap deduction (yellow card with number 1).
  - c) The third occurrence of not following the rules described in paragraph (18) - (20), or exceptionally serious incident, or causing another boat to stop will be punished by a two-lap deduction (yellow card with the number 2).
  - d) The fourth occurrence of not following the rules described in paragraph (18) - (20), or exceptionally inconsiderate behaviour of a competitor will be punished by disqualification (red card). The model has to be taken out of the water immediately.

The competitor must be verbally and visually notified of a penalty. *There is no possibility of an appeal against the decision.* The start position official must record the penalty and the start number of the competitor.

- (25) The end of the race is indicated by an acoustic signal. All models must after the signal complete the commenced lap and this lap will be counted. After the final signal the lap counters will record the time of delay for every model passing the finishing line. This time will be recorded with the number of laps.

## **6.18 Lap Counting for FSR-O races**

Lap counting can be manual or computerised.

### **6.18.1 Manual lap counting**

- (1) *With manual lap counting referees for counting will be provided by the organiser the referees (judges) are responsible for the careful and proper lap counting. If difference of opinion exists amongst the lap counter referees, the decision lies with the start position official.*

- (2) *The announcers and operators (counters) are working in pairs. They will supervise the counting of the models. The announcers will call at the passage of the finish line the respective start position number which will be registered by the operator (counter)*
- (3) *The lap counters must be seated on the right side from the pontoon(see 6.18.2.point 4)*

### **6.18.2 Computerised lap counting**

- (1) For computerised lap counting only 4 to 6 lap counters are needed (2-3 announcers, 2-3 operators of the counting equipment).
- (2) The announcers and operators work in pairs and will be responsible for counting the models. The announcers will call the number of the model passing the finishing line and the lap will be recorded by the counting equipment operator.
- (3) Lap counters will only do the lap counting. Any lap deductions will be recorded by the assistant pontoon judges and will be deducted from the total of laps recorded by the lap counters at the end of the heat.
- (4) There is only one finish line for all 8 models. The finish line is located on the right hand side of start position 1 from the pontoon. The lap counters will be located in a raised position in line with the finish line.
- (5) In the event of equal number of laps, the competitor whose model passes the finish line first, will be the winner.

### **6.19 Scoring in FSR-O classes**

- (1) The competition result is decided on the number of valid laps and the delay time after deduction of penalty laps.
- (2) The best three of four heats will be counted together for qualifying scores.
- (3) If there are 8 or fewer competitors entered for a particular class only qualification has to be run. This will be the final result.
- (4) The places will be decided on the number of laps achieved. When there is more than one competitor with the same number of laps, the competitor with the shorter delay time will be placed higher.
- (5) In the event that a final race takes place in accordance with paragraph 6.17 item (3), the placing are as follows:
  - a) The finalists are placed according to their finishing position in the final.
  - b) Placing of the remaining competitors will be in sequential order of the number of laps and delay time achieved in their qualifying heat.

### **6.20 Composition of Result Lists in the FSR-O classes**

The following items should be recorded in the result list of a competition in the FSR-O class:

- Type, place and date of the event
- Sequence of placing in accordance with paragraph 6.19
- Class

- Surname, Christian name, country and registration number of the competitor
- Number of valid laps (in brackets any laps deducted) from each heat and total
- The delay time from each heat and total
- Name and registration number of the judge
- Signatures of the chief judge

## **7 Methods for measuring noise levels in the FSR category**

### **7.1 General**

- (1) The measurement microphone must be positioned as follows:
- Height 1000 mm approx. X 200 mm above water level
  - Position 25 meters to the right for FSR-V and to the left for FSR-H/O at the right angle to the centreline of the FSR course and 22 meters away from the line connecting the two lowest buoys.
  - *The measurement microphone must be shown at right angles and with the connecting line of the two lowest buoys and securely attached.*

(2)

(3)

### **7.2 Measuring methods in FSR-H classes**

### **7.3 Measuring methods in FSR-V/O classes**

- (1) At least three noise level measurements must be taken for each model during the race, under the following conditions:.
- There should be no other boat within 15 meters around the model being measured.
  - The noise measurement must be taken when the boat is on the base line at least 15 meters away from the microphone.
  - The measurements must be evenly spaced during the race.
- (2) The competitor must be advised immediately if their boat exceeds 80dB/A. If the second measurement also exceeds the noise level they will receive a warning and if the third measurement exceeds the noise level they will be immediately disqualified..

## **Appendix 1.**

### **Guide to measurement/set up a FSR-V/O course**

In order to set up an FSR-V/O course you need two fixed point 100m apart, 2 X 70 strings and 2 X 122 m strings (points C-A-C, C-A1-C) and 2 X 78.1 m strings (C-B-C).
